Mobile Based Payment Solution for Merchants

Problem Statement

Implement a mobile based payment solution for merchants of all sizes e.g. taxi drivers, stores etc.

Solution

- All-in-one payments solution – no need to visit your bank for an internet merchant account.
- One can make payment by multiple mode as Debit/credit cards transactions, my wallet transactions.
- The merchant has online access to his account, where he can view his profile, change settings, manage merchandises, transactions and orders, receive technical support documentation, perform manual transactions using an online POS terminal, and capture and refund authorization transactions.
- Supports a proprietary method of mobile payments.
- It can be integrated with various mPOS devices.
- After Successful transactions app generate a receipt for both merchant and buyer.
- We can see all Transaction history.
- SecurePay Online Payments is PCI DSS compliant and can be used along with SecurePay's FraudGuard, which helps to detect and stop fraudulent transactions before they occur.
- Card and Mobile Payment API to interface/integrate payment options in Merchant Cash Register apps

Technical Details

- Using Java, Objective-C, C#, Xamrin.
